SPAWAR Enterprise Program Offices March 2005

Deployable Joint Command and Control Joint Program Office (PMW 140) PEO C4I and Space

Focused on integrating existing applications into modular, scaleable, standardized joint C2 systems that can be deployed on short notice.

Command and Control Program Office (PMW 150) PEO C4I and Space

Provides joint command and control solutions, including targeting support, chemical-biological indications and warnings, and logistics support. Integrates real-time (CTP) and near real-time (COP) tactical pictures. Interfaces with open architecture Single Integrated Air Picture.

Networks, Information Assurance and Enterprise Services Program Office (PMW 160) PEO C4I and Space

Provides all common network services and commodities used by multiple programs. Consolidates network services in all classified domains to support cross-domain and coalition operations.

Communications Program Office (PMW 170) PEO C4I and Space

Provides all radios, terminals and antennas, not including Airborne Maritime Fixed Radio, and is the single C4I communications integrator for PEO C4I and Space.

Intelligence, Surveillance, Reconnaissance and Information Operations Program Office (PMW 180) PEO C4I and Space

Consolidates all ISR functionality within the PEO to provide a better multi-INT capability within product lines, including meteorological and oceanographic (METOC) support services.

Airborne Maritime Fixed - Joint Tactical Radio System Program Office (PMW 190) PEO C4I and Space

Provides common and S/service-specific ancillary equipment.

Carrier Integration Program Office (PMW 750) PEO C4I and Space

Delivers integrated C4I suites to carriers, command ships and new construction platforms.

Ship Integration Program Office (PMW 760) PEO C4I and Space

Develops common radio room for surface platforms, integrates surface-unique capabilities and delivers integrated C4I suites to modernization and new construction platforms.

Submarine Integration Program Office (PMW 770) PEO C4I and Space

Develops submarine-specific systems and delivers integrated C4I suites to modernization and new construction platforms.

Air Integration Program Office (PMW 780) PEO C4I and Space

Develops airborne-unique networking capabilities and delivers integrated C4I suites to airborne platforms.

Shore Integration Program Office (PMW 790)

PEO C4I and Space

Integrates shore network solutions with major afloat platforms and delivers integrated C4I suites to modernization platforms.

SPAWAR Space Field Activity

The mission of the SPAWAR Space Field Activity (SSFA) is threefold. The SSFA provides line management staffing of the National Reconnaissance Office (NRO). Further, SSFA personnel coordinate naval space research, development and acquisition activities between NRO and other space programs. Finally, the SSFA provides naval space and warfare experience to develop superior and affordable space systems in support of national missions and joint, combined and naval operations.

SPAWAR Naval-NRO Coordination Group

The purpose of the SPAWAR Naval-NRO Coordination Group (NNCG) is to ensure that naval planning decisions are made with full awareness of reconnaissance capabilities under development by the NRO, and conversely, to ensure that the NRO is kept informed of evolving naval warfighting capabilities and tactical support needs. The NNCG strives to introduce NRO-derived advanced concepts to warfighters through the involvement in war games, Advanced Warfare Experiments, and fleet exercises. The NNCG helps the Navy-Marine Corps team develop the tools and skills needed to fully exploit national systems' capabilities by coordinating training and support to operational forces.

SPAWAR Reserve Program

The SPAWAR Reserve mission is to augment the command in providing naval commanders a decisive warfare advantage through the development, acquisition and life cycle management of effective and responsive battle management systems, undersea, terrestrial and space sensors, and information management and transfer systems. SPAWAR reservists are integrated at all levels of these mission areas.

Navy Communications Satellite Program Office (PMW 146)

PEO Space Systems

The mission of the Navy's Communications Satellite Program Office is to acquire space based communications systems for the fleet and joint users.
